In the District Court of the Fifth Judicial District of the State of Utah, in and for Millard County

RICHLANDS IRRIGATION CO., Inc. Plaintiffs, vs. WESTVIEW IRRIGATION CO., Inc., et al., Defendants.	Proposed Determination of Water Rights on Sevier River System by the State Engineer.

Now comes the State Engineer and respectfully shows the court:

I.

That under the provisions of Chapter 67, Session Laws of Utah, 1919, the State Engineer is required to make a proposed determination of all rights to the use of water from the Sevier River System in the above entitled case.

II.

That the Sevier River and its tributaries lie entirely within the State of Utah and constitute one of the major river systems of the State. The area drained by this system is approximately 5,500 square miles and embraces all or parts of Garfield, Piute, Sevier, Sanpete, Juab and Millard counties. The main stream, or South Fork, rises in several spurs of the Wasatch Range of mountains on the northern slope of the southern rim of the Great Basin in Kane, Iron and Garfield Counties. It is fed at the upper end chiefly by Asay and Mammoth creeks which have confluence directly above the town of Hatch, in Garfield County. Eighteen miles below at Panguitch it is increased by Panguitch Creek. The next principal tributary is the East Fork which joins the stream 45 miles further down, near the town of Junction, Piute County. Otter Creek, flowing from the north, is the main tributary to the East Fork, joining with the East Fork some 12 miles east of the Piute Reservoir. Below the Piute Reservoir in the order named, are the following principal tributaries: Ten Mile Creek joining the Sevier River from the west, Manning Creek from the east, Cottonwood Creek, Bullion Creek, Beaver Creek, Deer Creek and Clear Creek from the West, Monroe Creek, Cove River, Lost Creek, Salina Creek and Willow Creek from the east, and the San Pitch River from the northeast. Below the Sevier Bridge Reservoir the principal tributary is Chicken Creek which joins the Sevier River from the north. The surplus water from the Sevier River, mostly seepage water from irrigated land, sinks in a series of lakes in the Sevier Desert, in central Millard County. From the source of the South Fork to the sink is approximately 225 miles.

III.

That there have been more than forty court decrees rendered on suits concerning water rights on the Sevier River System. The two most important ones are entitled "Deseret Irrigation Company and Leamington Canal Company vs. Samuel McIntyre, et al.," and "Richfield Irrigation Canal Company, et al., vs. Circleville Irrigation Company, et al." A decree of the first mentioned case was rendered by Judge E. V. Higgins in 1901 and on the second by Judge C. W. Morse in 1906. These two decrees were largely the result of stipulations between committees and representatives of water users.

IV.

That after full consideration of decrees of court, the statements of claims, the survey records and files, and after a personal examination of the Sevier River System the State Engineer has formulated a proposed determination of all rights to the use of water from said system and makes his recommendations to the court regarding the same as hereinafter set forth.

V.

That the rights are arranged in geographical order from the source to the mouth of said system. At the end of the determination is an alphabetical index list of the names of all corporations, associations and persons that have been made party defendants in this case. For convenience of identification only, each claim is given an arbitrary claim number.

VI.

That the acreage each party to this suit is entitled to irrigate as hereinafter set forth was determined from statements of water users' claims duly filed in this case, from "Sevier River Hydrographic Survey Records," which are made a part hereof, from the records of applications to appropriate water from the Sevier River System on file in the office of the State Engineer, and from field investigations made by the State Engineer, his deputy and assistants during the years of 1922 to 1925, inclusive.

VII.

It is recommended that for purposes of distribution the entire Sevier River Drainage area be divided into four zones, designated as zones A, B, C and D, respectively. The boundaries, rights and methods of distribution of each of the zones shall be as follows:

Zone A.

This zone comprises the rights on the East Fork of the Sevier River below the Otter Creek Reservoir Dam, on the main river below the Piute Reservoir Dam to the Sevier Bridge Dam, and on the San Pitch River below the Gunnison Reservoir Dam. In this zone a strictly headgate measurement shall rule. At the beginning of each season definite allotments based on this proposed determination shall be made by the Water Commissioner which may be drawn on at the pleasure of the owner, but which shall not exceed the schedule of rights arranged by the said Water Commissioner. There shall be a yearly allotment made at the beginning of each irrigation season by the said Water Commissioner which shall be dependent upon what the supply is determined by the said Water Commissioner to be, but which shall not exceed the value of the maximum allowed in this proposed determination. In case the supply is determined to be less than maximum for the season then the rights shall be prorated on a basis of the minimum which value is given in this proposed determination. The rights in this zone are given maximum and minimum values since rights are contingent directly upon the stream flow throughout a year.

Zone B.

This zone comprises the rights on Panguitch Creek below Panguitch Lake; on the main river from the Sevier Bridge Reservoir to Oasis; on Chicken Creek below the Chicken Creek Reservoir Dam and rights under the Molen Springs, Koosharem Reservoir and Box Creek Reservoir. Rights in this zone are to be placed on a headgate duty and are to have a maximum yearly diversion except in years when the maximum total is not available in which event the several rights are to be placed on a pro-rata basis. Rights in this zone are placed on maximum value for the reason that any amount of water beyond this value shall be held as holdover for dry seasons. In this zone a holdover supply is a necessity since the rights are not directly contingent upon the stream flow throughout a season.

Zone C.

This zone comprises all rights not specified in Zone A, Zone B and Zone D and which cannot be placed on a headgate duty due to location and physical conditions. Such rights must consequently be placed on direct flow. The rights in this zone are allowed on a duty of 40 acres to a second foot during the high water period which is the period wherein the water supply is sufficient to give to all lands a full right on this duty. After the water supply is insufficient to fill the rights as above set forth, then the duty shall be raised to 60 acres to the second foot and distributed upon this basis until the supply in this said zone is insufficient to fill all rights under the 60 acres to the second foot duty, then those having the junior or subsequent appropriations shall be barred, in order of priority from further diverting water until said source of supply again increases to such volume as will fill said subsequent appropriator's rights, providing, however, that said increase in flow comes within the period of use set out in this proposed determination of rights.

Zone D.

This zone comprises all rights in the San Pitch Drainage Area except those rights under the Gunnison Reservoir System. Rights in this zone are to be on a direct flow basis having a duty of from 35 to 80 acres to the second foot. When there is insufficient water to satisfy the low water rights within this zone then the water is to be pro-rated and distributed on a priority basis.

VIII.

Section 34, Chapter 100, Session Laws of Utah, 1903, reads as follows:

"Rights to any of the unappropriated water in the State may be acquired by appropriation, in the manner hereinafter provided, and not otherwise* *."

Acts amendatory to said Chapter 100 contain the same provision. Because of that provision of the law, upheld by the Supreme Court of Utah, all persons who have used water since 1903 without first making application therefor as provided by Statute, are determined to have no right, title or interest in or to the use of water of the Sevier River System by reason of such use.

IX.

That the duty of water as hereinafter set forth was determined from decrees of court, from reports of water commissioners duly appointed to distribute the water of said system, from field investigations made under the direction of the State Engineer, from statements of water users' claims duly filed in this case and from records of the duty of water established by investigation, measurements and distribution of the waters of other river systems in the State of Utah over a period of years, where conditions under which water has been used are similar.

The apparent low duty of water on the tributaries and on the San Pitch River and its tributaries, is allowed for the reason the sources of supply are intermittent and variable, and in order to supply sufficient water to properly mature the crops, it is necessary to use large quantities of water when available. Alfalfa, grain and garden products are the main crops, and which require early and increased irrigation for their proper maturing. Furthermore, it is advisable to allow the use of these increased quantities whenever possible inasmuch as ground storage is the only source of supply after the high water is gone.

The beneficial use of water governs in all cases in this proposed determination of rights and the waste of water shall be prohibited.

X.

It is recommended that in cases where the quantities of water determined to various individual rights are too small for practical irrigation purposes such rights be combined wherever feasible and rotated among the various users in such manner as to deliver to each the total quantity of water which he would receive if distribution were made on the basis

of continuous flow as outlined in the determination. Where it is not feasible to combine the flow determined to several rights it is recommended that the flow distributed to isolated rights be increased to give a stream sufficient for practical irrigation purposes and the time decreased in such a way as to deliver to such rights the same amount of water as would be delivered if the continuous flow determined to the right should be distributed.

Such combination of rights and flow are matters of practical distribution and should be under control of the river water commissioner, who is under the jurisdiction of the State Engineer.

That notwithstanding this determination of water rights users of water shall at no time divert more water than can be beneficially used and waste of water should be prohibited.

That it is recommended that the rights to the use of water in the Sevier River System be decreed to the various parties substantially as set forth in this determination but it is further recommended that the court retain jurisdiction of this case for a period of five years for the purpose of making adjustments in the duty of water, correction of errors and for such other purposes as time may indicate to the court as proper and just. In all matters whatsoever pertaining to this determination and the decree to be rendered the services and advice of the State Engineer are at all times available to the court.

It is further recommended that the quantity of water allowed under this proposed determination be measured at or near the point or points of diversion unless otherwise specified, also that there be installed and maintained in good condition at all tmies suitable measuring devices at or near said point or points of diversion, and that said diverting works be maintained in such condition as will prevent an unreasonable loss of water.

XI.

That the rights declared herein which are founded upon appropriation of said water by application to the State Engineer of the State of Utah, are subject in their exercise to, and are conditioned upon compliance with the terms of the application upon which each respective appropriation is based and upon compliance with the provision of the laws of the State of Utah relating thereto, and proof of appropriation shall be made to the State Engineer in compliance with said laws. At the end of the five year period above mentioned, the status of said application shall be reported, by the State Engineer, to the court at which time the final decree will be made to agree with the records of said application as shown by the records in the State Engineer's office.

3 0 5 2, 7

"c.f.s." is used throughout this determination to designate a flow of one cubic foot of water per second of time.
"ac.ft." is used throughout this determination to designate a quantity of water sufficient to cover an area of one acre to a depth of one foot, or 43560 cubic feet of water.
"duty" is used throughout this determination to designate the number of acres required to be irrigated by one cubic foot of water per second of time, direct flow, or the amount of water in acre feet required to irrigate one acre of land.
All descriptions are referred to Salt Lake Base and Meridian.
