Office

Burntfork Wyo
July, 2, 1943

State Engeneer,
Salt Lake City, Utah
Gentleman:

I am writing in regard to the Thompson Creek, tributary to Burntfork Creek, which we have been diverting through the Hoop Lake, Reservoir, and runing this water through the Hoop Lake Canal which they gave us permission to do, in order to conserve water, we can get it down to the old water rights in Wyoming with less shrinkage by doing it in this way, we have been unable to get any water down any other way as the Utah water users have been diverting all of Burntfork Creek all season and have not let any come down to these rights in Wyoming.

They promised the State Engineer of Utah last year that they would place head gates in their ditches so that water could be regulated, that has not been done, and they are diverting the whole Creek and have been all season.

We would like to continue to divert Thompson Creek through the Hoop Lake Reservoir and Canal as we have been doing up to date, as the Utah users are wasting water using it on Pasture lands

We would like to hear from you on this mater as soon as possible

Yours Respectfully

Wyo. Water users.

Louis Stall, Water
