IN THE MATTER OF THE GENERAL DETERMINATION OF RIGHTS TO THE USE OF ALL THE WATER, BOTH SURFACE AND UNDERGROUND, WITHIN THE DRAINAGE AREA OF BEAR RIVER AND ALL ITS TRIBUTARIES IN UTAH

BOX ELDER COUNTY DIVISION, BEAR RIVER BAY SUBDIVISION

Cache County Civil No. 550108220 (29-4)

NOTICE TO WATER USERS WITHIN THE ABOVE-DESCRIBED DRAINAGE AREA:

This is your copy of the Proposed Determination of Water Rights in the Box Elder County Division, Bear River Bay Subdivision, Area No. 29, Book 4, of the Bear River General Adjudication. The Division of Water Rights has prepared the Proposed Determination as required by statute for use in this matter pending before the Court. The Proposed Determination is the State Engineer's report and recommendation to the Court of how all rights involved shall be determined. A copy of the Proposed Determination will be on file with the Clerk of the First District Court in Logan, Utah. Additional copies are available, upon payment of the cost of printing, from the Division of Water Rights at 1594 West North Temple, Suite 220, Salt Lake City, Utah, telephone 801-538-7240.

You are hereby notified that under Section 73-4-11 of the Utah Code, any person claiming a water right in the Bear River Bay Subdivision who is dissatisfied with the Proposed Determination may object, but only in accordance with the following conditions: The objection must be in writing and duly verified on oath. The claimant must file the objection in the First Judicial District Court, Logan Department, 135 North 100 West, Logan, UT 84321, within ninety (90) days after being served with a copy of the Proposed Determination. Service is effective on the date the Proposed Determination is mailed or hand delivered to the claimant. The claimant should also file a copy of the objection with the Division of Water Rights at the address shown below.

This copy of the Proposed Determination was served on you, either in person or by mail, on this _____ day of _____, 2005.

PROPOSED DETERMINATION OF WATER RIGHTS IN THE BEAR RIVER GENERAL ADJUDICATION
BOX ELDER COUNTY DIVISION
BEAR RIVER BAY SUBDIVISION
AREA NO. 29, BOOK 4

Cache County Civil No. 550108220

Jerry D. Olds, P.E., State Engineer of the State of Utah, respectfully submits this report to the Court.

1. Geographical Area Covered. This General Adjudication, known as the Bear River General Adjudication, includes all water sources, both surface and underground, within the drainage area of the Bear River and all its tributaries in Utah. This Proposed Determination includes water rights in the Bear River Bay Subdivision of the Box Elder County Division of the Bear River General Adjudication. The Bear River Bay Subdivision is the enlarged area on the map shown hereinafter. The Utah Division of Water Rights has designated this area as Area No. 29, Book 4.

2. Commencement. On April 25, 1957, the Court ordered commencement of the general adjudication and directed the State Engineer to make a determination of all rights to the use of water from both surface and underground sources within the drainage area of the Bear River and all its tributaries.

3. State Engineer's Activity. The State Engineer has followed the requirements of Title 73, Chapter 4 of the Utah Code. He has given the required notices; served and published summons; completed hydrographic surveys; and taken claims from the water users within the area. The State Engineer has examined judicial decrees relating to water rights in this area, searched the files of the Division of Water Rights and searched the records of the County Recorder.

Prior to making the recommendations in the Proposed Determination, the State Engineer has given careful consideration to the Statements of Water User's Claims filed herein. To the best of his knowledge, no right to the use of water within this area has escaped his attention.

4. Beneficial Use. In preparing the Proposed Determination, the State Engineer has based his recommendations on Utah water law, including the principle that beneficial use shall be the basis, measure and limit of the right to the use of water. Utah Code Ann.§ 73-1-3 (1989).

5. Water Rights. A water right, regardless of its nature or origin, must be represented by a valid Statement of Water User's Claim or State Engineer's Recommendation in order to be included in the

Proposed Determination and recognized in the General Adjudication.

Under Utah law, water rights can be acquired in only three ways: by application to the State Engineer's Office, also known as the Division of Water Rights; by diligent use prior to enactment of the statutes establishing the application process as the sole method of appropriation ("diligence" rights); and by adverse use.

Currently, the only way to initiate a new water right is by application to the State Engineer's Office. After the State Engineer has approved the application, the applicant may proceed, within a set time, to divert the water and put it to beneficial use. After putting the water to use in accordance with the application, the applicant files proof of beneficial use and the State Engineer issues a certificate of appropriation.

Diligence rights are based on the continuous beneficial use of water dating back to before March 12, 1903, for surface water, or March 22, 1935, for underground water. Prior to these dates, Utah statutes provided that a water user could acquire a water right by diverting and using the water for a beneficial use. After those dates, new water rights could be acquired only by application to the State Engineer's Office.

Prior to 1939, water rights could be acquired by the adverse use of a valid water right. In 1939, the Utah statutes were amended so water rights could no longer be acquired by adverse use or adverse possession.

6. Duty of Irrigation Water. Because beneficial use is the limit of a water right, an irrigation water right is limited by the acreage actually irrigated. The amount of water that may be diverted to irrigate the crops to maturity in a specific area is referred to as the duty.

Using the best available analytical methods and data, the State Engineer has determined that the irrigation duty in the Bear River Bay Subdivision is 4.00 acre-feet per acre annually, which accounts for the amount consumed by the crops, the amount supplied by precipitation, and conveyance losses. The diversion of more than 4.00 acre-feet of water per acre of land each year is unnecessary and would not be a beneficial use of the excess water. This duty is based on efficiencies associated with flood irrigation practices. As irrigation practices change to improve irrigation efficiency, it is anticipated less water will be diverted. The irrigation duty is measured at the point of diversion from the natural water source.

7. Quantity for Stockwatering. Water rights for watering stock are quantified in "Equivalent Livestock Units." An Equivalent Livestock Unit represents the amount of water consumed by one large animal such as a horse or cow. The conversion of other animals to Equivalent Livestock Units is based on the amount of water the animal consumes compared to a large animal. After conversion, the number of Equivalent Livestock Units is rounded up to the next whole number. The acre-foot award is 0.028 acre-foot per year (25 gallons per day) per Equivalent Livestock Unit. More information on annual diversion allowances for stock watering is available on the Division of Water Rights web site.

8. Quantity for Domestic Uses. Water rights for domestic or household use are based on 0.45 acre-foot per year (400 gallons per day) for each family.

9. Waterfowl Habitat. Due to the presence of unique geographic and hydrologic features in the Bear River Bay Subdivision, this Proposed Determination recognizes as a beneficial use the diversion and use of water for the enhancement of waterfowl habitat. The period of use and quantity of water allowed for waterfowl habitat is based on the best available data obtained from hydrologic models created by the United States Fish and Wildlife Service and the Utah Division of Water Resources for water demands at the Bear River Migratory Bird Refuge and is specific to this area.

10. Irrigation Periods. The State Engineer has determined that irrigation in this area is beneficial only from April 1 through October 31, which is a specific limitation on water rights in this Proposed Determination.

11. Federal Reserved Rights. There are certain water rights that are not based on compliance with Utah law, but instead are the result of the withdrawal of public lands by the federal government for a specific purpose. These "reserved water rights," owned by the federal government, are limited to providing sufficient water to fulfill the primary purpose of the withdrawal and carry a priority date that is the same as the date of the withdrawal. This Proposed Determination does not address federal reserved water rights. If any federal reserved water rights are asserted in the Bear River Bay Subdivision, they will be addressed in a subsequent report and recommendation.

12. Recommendation and Retention of Jurisdiction. In accordance with his findings and determinations, the State Engineer respectfully recommends that the Court adopt this Proposed Determination of Water Rights; that the Court decree to the respective water users the water rights as set forth herein, subject to any corrections the Court orders; and that the Court disallow the water rights recommended to be disallowed. The State Engineer also recommends that the Court retain jurisdiction over this Bear River General Adjudication to periodically adjust water rights as needed to correct clerical errors or mistakes; to account for changes in ownership or other changes in the water rights; or, in response to actions taken on new or pending applications.

13. Continued Assistance. The State Engineer and the staff of the Division of Water Rights express their continuing willingness to assist the Court in this General Adjudication, as the Court requests.

14. Date of Publication. This Proposed Determination of Water Rights was approved for publication on the 17th day of June, 2005.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Salt Creek Waterfowl Management Area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the Salt Creek Waterfowl Management Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 563.89 acres. This claim is limited to the sole supply acreage of 480.00 acres. The total annual diversion limitation under this claim is 1,920.00 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion limitation - AF
January	26.78
February	36.99
March	325.35
April	270.57
May	219.65

June	158.37
July	256.94
August	184.29
Sept.	307.35
October	84.18
November	40.53
December	9.01

Total 1,920.00 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described point of diversion and all natural sources.

The originally authorized use of water is described herein, however, the claimant has amended the use of water under this right. The water is being used to supplement shares of stock in the Bear River Canal Company for the irrigation of 4.70 acres (sole supply 2.345 acres) within the SE4NE4 of Section 2, T11N, R3W, SLB&M. A change application for this amendment needs to be filed by the claimant.

REMARKS:

The originally authorized use of water is described herein, however, the
claimant has amended the use of water under this right. The water is being
used to to irrigate 0.4345 acre within the NW4NE4 of Section 11, T11N, R3W,
SLB&M. A replacement well is located 80 feet southwest of the original
location. A change application for this amendment needs to be filed by the
claimant.

###STOCKWATERING: 300 Equivalent Livestock Units

PERIOD OF USE: 01/01 TO 12/31

Stockwatering is limited to 63 ELU's based on the proportionate flow of the listed supplemental water rights.

Water Right Number 29-973 is limited to the irrigation requirements of 122.0300 acres.
This Right has a total irrigated acreage for all claims of 243.68 acres.

REMARKS:

Although a priority of 1869 is claimed for this right, due to the concentration of surface waters by the construction of the old Central Pacific Railroad grade, no physical diversions other than spreader ditches were made by the claimant or their predecessors prior to 1903. It is therefore believed that the claimant holds a diligence right to the use of waters as they have historically and naturally flown over claimants property. However, the use of these waters is limited to the same conditions as set forth for adjacent lands owned and operated by claimant under Judge Lewis Jones` Decree in Civil No. 4473, in the First Judicial District Court in and for Box Elder County. Because of the nature of this right, no call can be made on water covered by rights to irrigation or stockwatering established to the north and east and upstream from claimant`s lands.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Public Shooting Grounds Waterfowl Management Area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the Public Shooting Grounds Waterfowl Management Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 5,998.15 acres. This claim is limited to the sole supply acreage of 466.00 acres. The total annual diversion limitation under this claim is 3,262.00 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion limitation - AF
January	45.49
February	222.76
March	392.83
April	380.16
May	373.18
June	348.60
July	392.83
August	356.81
September	380.16
October	285.03
November	68.85
December	15.30
Total	3,262.00 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion limitation - AF
January	53.56
February	73.99
March	650.80
April	541.22
May	439.37
June	316.80
July	513.96
August	368.65

September	614.79
October	168.39
November	81.07
December	18.01
Total	3,840.62 af/yr

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described point of diversion and all natural sources.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Public Shooting Grounds Waterfowl Management Area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the Public Shooting Grounds Waterfowl Management Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 3,334.23 acres. This claim is limited to the sole supply acreage of 426.71 acres. The total annual diversion limitation under this claim is 2,986.99 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion limitation - AF
January	130.25
February	260.10
March	278.03
April	269.06
May	278.03

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Bear River Migratory Bird Refuge. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the bird refuge. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 43,742.74 acres. This claim is limited to the sole supply acreage of 43,742.74 acres. The total annual diversion limitation under this claim is 425,771 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the refuge and the flow rate of this claim.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim was derived from the models and the flow rate of this claim. The monthly demand pattern for this claim is as follows:

Monthly Demand:

Month	Diversion limitation - AF
January	5,938
February	8,202
March	61,380
April	59,400
May	60,077
June	35,120
July	56,978
August	40,868
September	59,400
October	27,424
November	8,987
December	1,997
Total	425,771 af/yr

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

The 4 points of diversion described in this claim are referenced by Certificate of Appropriation No. a686. These points are not mapped on the hydrographic survey map. The State Engineer has re-mapped the points of diversion. Five points of diversion are shown on the hydrographic survey map corresponding to those originally described under Certificate No. a686. They are listed and described below. Points 1 & 2 correspond respectively with the diversions on the Bear River at the Reeder Overflow and the Whistler Canal.

Point 3 corresponds with the originally described diversion on the Bear River near the old Duckville Headquarters. Points 4 - 6 correspond with the originally described diversion near the old Refuge Headquarters. Points 4 - 6 describe each of the diversions into the three main channels controlled by radial gates.

POINTS OF DIVERSION SHOWN ON HYDROGRAPHIC SURVEY MAP
#1) S 1856 ft. W 2886 ft. from the NE Corner of Section 18, T9N, R2W, SLB&M.
Source: Bear River at Reeder Overflow
#2) N 220 ft. E 446 ft. from the SW Corner of Section 26, T9N, R3W, SLB&M.
Source: Bear River at Whistler Canal
#3) S 443 ft. W 325 ft. from the NE Corner of Section 35, T9N, R4W, SLB&M.
Source: Bear River near old Duckville Headquarters
#4) S 154 ft. E 2341 ft. from the NW Corner of Section 35, T9N, R3W, SLB&M.
Source: Bear River near old Headquarters
#5) S 207 ft. E 2270 ft. from the NW Corner of Section 35, T9N, R4W, SLB&M.
Source: Bear River near old Headquarters
#6) S 335 ft. E 2309 ft. from the NW Corner of Section 35, T9N, R4W, SLB&M.
Source: Bear River near old Headquarters

The State Engineer recognizes both groups of descriptions as valid points of diversion.

The total acreage represented on this claim reflects that mapped by the State Engineer`s office. It is noted, however, that the FWS has also mapped the effective service area within the Refuge boundary and has calculated an acreage of 44,325 acres. This represents a difference of 582.26 acres (1.3%). Both the State Engineer and the FWS believe the difference in acreage is due to the different methods of mapping by the respective agencies. The State Engineer and the FWS accept this difference and agree this claim represents the current service area under WUC 29-1014.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Public Shooting Grounds Waterfowl Management Area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the Public Shooting Grounds Waterfowl Management Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 6,945.69 acres. This claim is limited to the sole supply acreage of 3,580.98 acres. The total annual diversion limitation under this claim is 14,493.60 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion limitation - AF

January	1227.60
February	1148.40
March	1227.60
April	1188.00
May	1227.60
June	1188.00
July	1227.60
August	1227.60
September	1188.00
October	1227.60
November	1188.00
December	1227.60

Total 14,493.60 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

Diversion of Salt Creek onto the northern lands of the Management Area is controlled by a dike impounding Salt Creek in the Salt Creek Management Area located in Section 35, T11N, R4W and Section 2, T10N, R4W, SLB&M. A change application must be filed to include this Point of Diversion under WUC 29-1175.

Sec 36 T 12N R 3W SLBM															X		3.3500

or a Total of 3.3500 acres.

PERIOD OF USE: 04/01 TO 10/31

REMARKS:

This Right has been written for the irrigation of 3.35 acres. Only 1.40 acres is actually irrigated land shown on the hydrographic survey map. The remaining 1.95 acres of irrigation equal to 7.80 acre-feet of water is being stored in a 5.0 acre-foot capacity pond in the SW4SE4 of Section 36, T12N, R2W with a surface area of 0.7 acres and a maximum depth of 15 feet. 2.80 acre-feet of the 7.80 acre-feet includes evaporation losses from the surface area of the pond. The pond is used for recreation and fish

culture purposes and maintains the right for 1.95 acres of irrigation originally covered under this right which no longer exists. The claimant needs to file a change application for this amendment.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for the propagation and commercial hunting of waterfowl within the Bear River Club Company area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the companies` land boundaries. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 9,811.51 acres. The total annual diversion limitation under this claim is 39,534.63 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to

determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthy Demand:

Month	Diversion Limitation - AF
January	716.17
February	989.23
March	4,386.58
April	4,245.08
May	4,386.58
June	4,235.77
July	4,386.58
August	4,386.58
September	4,245.08
October	3,069.00
November	4,247.10
December	240.86
Total	39,534.61 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

###OTHER: Commercial Waterfowl Habitat PERIOD OF USE: 01/01 TO 12/31

The effective service area under 29-1755 is 402.78 acres with an annual diversion limitation under this claim of 2,819.46 acre-feet.

PLACE OF USE: (which includes all or part of the following legal subdivisions:)

	NORTH-WEST¼				NORTH-EAST¼				SOUTH-WEST¼				SOUTH-EAST¼			
	NW	NE	SW	SE	NW	NE	SW	SE	NW	NE	SW	SE	NW	NE	SW	SE
Sec 08 T 9N R 3W SLBM	X	X	X	X	X	X	X	X	X	X	X	X				

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for the propagation and commercial hunting of waterfowl within the Bear River Club Company area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the companies` land boundaries. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 402.78 acres. The total annual diversion limitation under this claim is 2,819.46 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl

Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthy Demand:

Month	Diversion Limitation - AF
January	39.32
February	54.31
March	465.00
April	397.32
May	322.55
June	232.57
July	377.31
August	270.63
September	450.00
October	137.71
November	59.51
December	13.22
Total	2,819.46 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

See Explanatory for "diversion limit".

###OTHER: Incidental creation and maintanence of vegetation for waterfowl habitat. PERIOD OF USE: 01/01 TO 12/31

REMARKS:

This is an overflow right limited to the use of Bear River flood waters on the above described lands during flood stage of the river as the waters naturally flood the banks of the river between the points listed above generally from May 1st to June 15th, and September 15 to October 30th. Flood waters may also be diverted through the Whistler Canal when flows are greater than 1000 cfs. When the river is not flooding it`s banks, high water diverted through the Whistler Canal under this right is limited to the irrigation of 705.46 acres west of the canal currently owned by Wetlands Management Company. Because the historic period of use is generally limited to that when the river is at flood stage the annual diversion limitation is 92/214 days x 3,817.32 x 4.0 AF/acre/year = 6,564.36 AF/yr.

or a Total of 118.1700 acres. PERIOD OF USE: 04/01 TO 10/31

REMARKS:

The use of water under this claim has been amended and is currently used for the irrigation of up to 137.23 acres on the east side of the Bear River in the N1/2N1/2 and lot 1 of Section 30, T10N, R2W, and approximately 50 acres in the SE4NE4, SW4NE4, NW4SE4, NE4SE4 of Section 5, T9N, R2W, SLB&M. Until a change application is filed and perfected, the POU described under this claim describes that included under the original Water Users Claim.

Pumping under this right historically has been during the spring and early summer, approximately half of the irrigation season, when the stage of the river and water quality are higher. Based on the historic irrigation practice the the annual diversion limitation is 237.40 acre-feet per year.

REMARKS:

Application Number A54829 (29-2521) was APPROVED by Memorandum Decision dated November 4, 1982, subject to the following conditions:
1. That the applicant shall not alter the existing spillway in any way specifically by lowering or widening.
2. That the applicant shall have no right to the water during Mr. Roper`s water turns provided under his shares in the Bear River Canal Company.
3. That the applicant must understand this is strictly an overflow filing and that if the regulation on the canal results in no overflow the applicant will have no claim to the water.

This Right has a total irrigated acreage for all claims of 66469.78 acres.

REMARKS:

This right is limited to the irrigation requirements of 3178.00 acres.

This right is supplemented by Bear Lake storage water delivered by Utah Power and Light Company to the Bear River Canal Company pursuant to that certain Conveyance and Agreement by and between Utah-Idaho Sugar Company and Utah Power and Light Company, dated December 30, 1912.

This right is subject to any future groundwater development located hydrologically above the point of diversion and any future changes or exchanges that may move water above, below and/or across this point of diversion for development of a public water project.

The water is diverted from the Bear River at Cutler Dam into the West Canal having a capacity of 750 cfs and the East Canal (Hammond Canal) having a capacity of 175 cfs. The water is then delivered throughout the service area of the Bear River Canal Company.

###STOCKWATERING: 16000 Equivalent Livestock Units

PERIOD OF USE: 01/01 TO 12/31

Stockwatering from April 1 to October 31 is included in the flow for irrigation, limited from November 1 to March 31 to 150 cfs.

Water Right Number 29-2856 is limited to the irrigation requirements of 25010.9800 acres.
This Right has a total irrigated acreage for all claims of 53888.44 acres.

REMARKS:

The period of use for irrigation under this claim is April 1 - October 31. However, based on historic use, during the period October 1 - October 31 irrigation uses under this right are subordinate to uses by the Bear River Migratory Bird Refuge under Water Right Number 29-1014.

This right and 2857 and 2858 are supplemented with Bear Lake storage water delivered by Utah Power and Light Company to Bear River Canal Company pursuant to agreement.

Stockwatering under this right and 2857 and 2858 from April 1 to October 31 is included in the flow for irrigation, limited from November 1 to March 31 to 150 cfs.

###STOCKWATERING: 16000 Equivalent Livestock Units

PERIOD OF USE: 01/01 TO 12/31

Stockwatering from April 1 to October 31 is included in the flow for irrigation, limited from November 1 to March 31 to 150 cfs.

Water Right Number 29-2857 is limited to the irrigation requirements of 9989.3700 acres.
This Right has a total irrigated acreage for all claims of 53888.44 acres.

REMARKS:

The period of use for irrigation under this claim is April 1 - October 31. However, based on historic use, during the period October 1 - October 31 irrigation uses under this right are subordinate to uses by the Bear River Migratory Bird Refuge under Water Right Number 29-1014.

This right and 2856 and 2858 are supplemented with Bear Lake storage water delivered by Utah Power and Light Company to Bear River Canal Company pursuant to agreement.

Stockwatering under this right and 2856 and 2858 from April 1 to October 31 is included in the flow for irrigation, limited from November 1 to March 31 to 150 cfs.

###STOCKWATERING: 16000 Equivalent Livestock Units PERIOD OF USE: 01/01 TO 12/31
Stockwatering from April 1 to October 31 is included in the flow for irrigation, limited from
November 1 to March 31 to 150 cfs.

Water Right Number 29-2858 is limited to the irrigation requirements of 3229.6500 acres.
This Right has a total irrigated acreage for all claims of 53888.44 acres.

REMARKS:

The period of use for irrigation under this claim is April 1 - October 31.
However, based on historic use, during the period October 1 - October 31
irrigation uses under this right are subordinate to uses by the Bear River
migratory Bird Refuge under Water Right Number 29-1014.

This right and 2856 and 2857 are supplemented by Bear Lake storage water
delivered by Utah Power and Light Company to Bear River Canal Company pursuant
to agreement.

Stockwatering under this right and 2856 and 2857 from April 1 to October 31 is
included in the flow for irrigation, limited from November 1 to March 31 to
150 cfs.

This Right has a total irrigated acreage for all claims of 66469.78 acres.

REMARKS:

This right is limited to the irrigation requirements of 16,511.04 acres.

This right is supplemented by Bear Lake storage water delivered by Utah Power and Light Company to the Bear River Canal Company pursuant to that certain Conveyance and Agreement by and between Utah-Idaho Sugar Company and Utah Power and Light Company, dated December 30,1912.

This right is subject to any future groundwater development located hydrologically above the point of diversion and any future changes or exchanges that may move water above, below and/or across this point of diversion for development of a public water project.

The water is diverted from the Bear River at Cutler Dam into the West Canal having a capacity of 750 cfs and the East Canal (Hammond Canal) having a capacity of 175 cfs. The water is then delivered throughout the service area of the Bear River Canal Company.

###OTHER: Waterfowl Habitat PERIOD OF USE: 01/01 TO 12/31

REMARKS:

Points of diversion as described on this claim are the points at which the stream or natural channels enter claimant`s property. This right is evidenced by Civil Decree #4473 and covers the use of Black Slough waters as they have naturally and historically flowed upon the claimant`s property. Black Slough naturally floods these lands during the months of April through June; 92 out of 214 days of the irrigation season. Therefore, the annual diversion limit under this right is limited to 92/214 x 548.57 acres x 4.0 AF/acre/year = 940.4 AF/yr.

Flow: Civil Decree #4473 establishes the flow 45.0 cfs shared by Water User`s Claims for this right and 3079,3080,3081,3082,3083,3084,3085,3086,3412.

Storage from 01/01 to 12/31, inclusive, in Part of Refuge Units 1, 2, and 3. with a maximum capacity of 28619.0 acre-feet.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Bear River Migratory Bird Refuge. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the Bear River Migratory Bird Refuge. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 1,589.84 acres. This claim is supplemental to 1014 and has no sole supply. The total annual diversion limitation under this claim is 3,840.80 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be specific to the Bear River Delta. The monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion Limitation AF
January	------
February	------
March	------
April	------
May	975.94
June	472.23
July	------
August	------
September	472.23
October	975.94
November	944.46
December	------
Total	3,840.80af/yr

(*Note. This is the maximum amount of water divertable when available during these months.)

The State Engineer believes that these waters were historically used during high flows of the Bear River. Therefore, this right will be included in the priority list of the Lower Bear River distribution system and will be recognized during periods of high water flow generally from May 1st to June 15th and September 15th to November 30th. The monthly demand pattern derived from the model subject to limitations based on the flow is as follows:

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

Sec 35 T 9N R 4W SLBM					*	*		X		X	*	*					*	*		X		X

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Bear River Bird Refuge. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the refuge. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 326.60 acres. The total annual diversion limitation under this claim is 2,000 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is specific to the Bear River Delta. The monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion Limitation AF
January	-------
February	-------
March	-------
April	-------
May	750.00
June	250.00
July	-------
August	-------
Sept.	200.00
October	400.00

November 400.00
December -------

Total 2,000.00 AF/year

The State Engineer believes that these waters were historically used during high flows of the Bear River. Therefore, this claim will be included in the priority list of the Lower Bear River distribution system and will be recognized during periods of high water flow generally from May 1st to June 15th and September 15th to November 30th.

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

Storage from 01/01 to 12/31, inclusive, in North Bay with a maximum capacity of 29343.8 acre-feet.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for the propagation and commercial hunting of waterfowl within the Bear River Club Company area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the companies` land boundaries. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 7,335.95 acres. The total annual diversion limitation under this claim is 11,817.03 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly

demand pattern is as follows:

Monthy Demand:

Month	Diversion Limitation - AF
January	----------
February	----------
March	----------
April	----------
May	4,615.78
June	----------
July	----------
August	----------
September	4,466.88
October	1,546.78
November	1,187.59
December	----------
Total	11,817.03 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

The claimant claims that man-made diversions were historically used to divert water during certain periods of the year when water was available and needed to maintain water in the North Bay. The State Engineer will include this claim in the priority list of the Lower Bear River distribution system. The claimant will continue the historical practice of using the Malad River under 29-1446 as the primary water right, and the Bear River as a supplemental source. When sufficient water has been available from the Malad river, the use of the Bear River water was limited to the months of May through June and September through November. The claimant also asserts the ability to divert water available below the Corinne Gage year around when the stage of the river is held artificially high.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat within the Salt Creek Waterfowl Management Area. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the

entire land area within the boundaries of the Salt Creek Waterfowl Management Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 3,083.19 acres. This claim is limited to the sole supply acreage of 2,769.59 acres. The total annual diversion limitation under this claim is 19,387.13 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion Limitation AF
January	270.38
February	373.47
March	3285.20
April	2732.05
May	2217.92
June	1599.16
July	2594.45
August	1860.89
Sept.	3103.43
October	850.03
November	409.22
December	90.93
Total	19,387.13 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

The descriptions of the POD`s on this claim relate to the locations shown on the hydrographic survey maps. The following descriptions are the surveyed descriptions of the POD`s as provided with the Diligence Claim. These are the same locations as described above and correlate with the above described POD #`s.

November	20.58
December	4.57
Total	974.83 AF/year

This amount is limited to that diverted for beneficial use and is the maximum amount of water available from the described diversion points and all natural sources.

The descriptions of the POD`s on this claim relate to the locations shown on the hydrographic survey maps. The following descriptions are the surveyed descriptions of the POD`s as submitted with the Diligence Claim. The POD # correlates with the above described POD #`s.

1) N. 1165 ft., W. 5015 ft. from SE cor. Sec. 18, T11N, R3W, SLB&M.
2) N. 1556 ft., W. 4953 ft. from SE cor. Sec. 18, T11N, R3W, SLB&M.
3) N. 141 ft., W. 3134 ft. from SE cor. Sec. 18, T11N, R3W, SLB&M.
4) S. 2220 ft., W. 103 ft. from SE cor. Sec. 18, T11N, R3W, SLB&M.

REMARKS:

The use of water under this claim is for the creation and maintenance of marshlands for waterfowl habitat. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the boundaries of the Salt Creek Waterfowl Management Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 1,920 acres. This claim is limited to the sole supply acreage of 232.72 acres. The total annual diversion limitation under this claim is 1,629.02 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Storage from 01/01 to 12/31, inclusive, in Main Marsh/Knudson Bay/Klondike with a maximum capacity of 2420.0 acre-feet.

REMARKS:

The point of diversion for this claim is a dike that impounds water from several underground water drains draining into the open drainage in the SE4NE4 of Section 2, T9N, R3W and underground water from drains draining into the open drainage running through the NE1/4 of Section 9, the SW1/4 of Section 10 and the NE1/4 of Section 15, T9N, R3W, SLB&M thus onto the Club`s property.

The use of water under this claim is for the creation and maintenance of marshlands for the propagation and hunting of waterfowl. Incidental storage of water behind shallow dikes is associated with such use. The Place of Use (service area) described under this claim is the entire land area within the

boundaries of the Chesapeake Duck Club Area. The effective service area is the acreage shown on the hydrographic survey maps and represents the historic extent of this right. The effective service area is 1,915.59 acres. The total annual diversion limitation under this claim is 2,659.54 acre-feet. The annual diversion limitation is based on yearly water use requirements reported for the Bear River Migratory Bird Refuge and the flow rate of this claim. The water use reported for the Bear River Migratory Bird Refuge was used as the basis to determine the water use under this claim because of the similar environments, landscape and purpose of the two management areas.

The water demand to maintain optimal marshland conditions for the Bear River Migratory Bird Refuge was determined by comparing two hydrologic models; one by the Utah Division of Water Resources and the other by the USA Fish & Wildlife Service. The water volume requirements to maintain waterfowl marshlands used in the models were reported in the Utah Division of Fish & Game publication No. 69-12 (Christensen, J.E., Water Requirements of Waterfowl Marshlands in Northern Utah).

The monthly demand pattern for this claim is determined to be similar to the Bear River Migratory Bird Refuge and is specific to the Bear River Delta. Considering this similarity and the flow rate of this claim, the monthly demand pattern is as follows:

Monthly Demand:

Month	Diversion Limitation - AF
