Burntfork Wyo.
June 21-39

State Engineer - Utah
Salt Lake City -

Dear Sir - By the request of Wyoming & Utah Water users I am writing for information in regard to the Interstate Irrigation Companys Canal which heads in Utah and irrigates Wyoming land.

They have conserved water in Island Lake in Utah which supplies the water for all the irrigation ditches in both Utah & Wyoming from the Burntfork stream. They release a certain

amount of water from the Lake and run it down through the channel of Burntfork stream to their head gate and turn into their canal twice the quantity they release. They refuse to stand any evaporation. The natural flow of the stream has never been taken; and they have used the peoples water up until the present time and reserved their stored water. The people have asked for it and been refused. This is an unusually dry year, and old prior rights that date back as far

100-5-4

was 1871 was dry and have
been for weeks.
Also Mr D. C. Jensen diverts
the east branch of Burntfork
into the west branch for
his own private use.
Will you please give me
information on School
Section No 16 as to the
water right which has
been granted to it.
Sec. No
Mr Jensen has water on
the whole section and
states that Utah gave
him a special permit
for this water. Will you
please advise about what
can be done in regard
to this situation and

let me know at your earliest convenience.

Yours Resp
Louis Stulle
Buffalo Wyo.
Wyoming Water Commissioner
