State Engineer
Salt Lake City, Utah.

Dear Sir;- In answer to yours of Dec. 13th 1934 regarding Muddy Irrigation I advised that they be cut off the assessment roll for 1935 instead of 1934.

I had never been called to divide any water for this company in 1933 so at the beginning of the 1934 season I inquired why the water Commissioner was never asked to divide the water of this company.

The answer was, they only have one stream

which is owned share and share alike by the stockholder, each one uses the water 48 hr each and therefore they have no watermaster and they feel that they dont need a water commissoner either.

By each using their 48 hrs the water makes a round in about 14 days.

Hoping this answers your question. I remain

Yours very truly
W. S. Carpenter
