State Engineer -
Salt Lake City
Utah.

Dear Sir:

In reference to your letter of June 8. concerning the appointment or selection of a committee to handle the Irrigation question in this district.

I wish to state that we are working as you sizested, or at least attempting to. I have been asked to represent our group, and have talked with some of the users of the other groups. A number of them are in accord with the your sugestions, while others, mostly those delinquent seem to have the attitude of "We get nothing out of a water commissioner or the State either, so we won't pay." Now what we want to know is this, Is it possible to force collection, and if so, how should we proceed to do so? Another thing, who should be listed in this District? Some of those allready listed say that they are on the head of the creek, and can get watter when they want it, so they dont need to pay some one for turning the water down to someone below - Its the man below who should foot the bill."

In short, we would like a little legal advice on this question - Can payment be forced? If so should we proceed to do so? If we dont will the State do it for us?

We are not very well informed upon such questions and wish to know how to better our condition -

Thanking you in advance for your kind consideration

Yours Very Truly.

Orderville Irrigation Company.
