State Engineer
Dear Sir:-

Yours of Apr 21st relative to your inability up to that time to locate a suitable man to engineer our water distribution this year and suggesting a local man to operate under direction of engineer etc received and beg leave to say, we would very much prefer a skilled disinterested man, the reason is obvious

In addition we think a state man, that is a man under the Engineer office should controll these waters for several years now in order that the real facts of ownership be fully understood for the final decision under the law suit now pending.

I beg to advise the printed copy of ownership as sent out by you is chuck full of errors false claims and inaccuries whether they occur inadvertantly or otherwise

The Cedar Creek high Water Irr Co will make protest later.

This is one big reason for state man, However if that is impossible we will have to see what can be done

mean while if you discover a man we should much prefer that

Thanking you very kindly
I am respectfully
C. W. Sorensen
