State Engineer
Salt Lake City

Mt Pleasant Ut
May 11th 1925

Dear Sir-

Owing to the scarcity of snow in the Cuts the current year and due to the fact that the Twin Creek Irr Co. which controlls and distributes the waters of Twin Creek and Cedar Creek of Sanpete Co has not been giving satisfaction to other interested water owners in the past

The Stock Holders of the Cedar Creek High Water Irr Co would like to know if they may apply to the State Engineers office for a compenant man to supervise the distribution of the waters of said streams during the short period of high water in the event they feel they do not get justice from the said Twin Creek Irr Co when the high water comes on

If they can get such a man on short notice you know with little snow in the mountains it is only a matter of flush waters from a week to perhaps twenty days and if action is necessary it must be quick or the high water will be gone before relief can be had, and then it is too late

The first warm days will bring down the snow and these people feel they should be ready to protect their interests at the seasonal point

Will say they made application to the Engineers office 2 years ago. One Mr Brand was sent down to look after the matter and gave very splendid satisfaction. And they hope if necessary you will help them again. Thanking you very kindly

I am respectfully

[illegible] Sorensen
Secy Cedar Creek High Water
Irr Co.
