April 30, 1934

Honorable J. H. Humphries
State Engineer
Salt Lake City.

Dear Sir: Could you aid us in properly interpreting a paragraph contained in the Proposed Determination of Water Rights on the Weber Creek System as particular pertaining to the rights of Cris Moosman.

This paragraph is found on page V of the Proposed Determination of Water Rights by the State Engineer. (Copy on file in your office)

The part in question reads. "and used as a supplemental supply to water from Boulder Creek to irrigate 15.2 acs." - -

"No water to be diverted from Weber Creek except when the supply from Boulder Creek is insufficient to supply the beneficial needs of claimant, and then only in amount necessary to make up the deficiency in water from Boulder Creek."

One view contends that the water comming from the Boulder source has been, in part at least, used on other lands and that the option is with Mr. Moosman whether or not any water from the Boulder source be used on this specified 15.2 acres.

so long as he has other land the Boulder water could be used on.

The other view contends that whenever the supply from Boulder is sufficient to irrigate the 15.2 acres, Mr. Moosman has no right to the use of Deer Creek water irregardless of any other lands he may wish to use the Boulder Creek water on.

Thank you for any advice you may give us.

Very respectfully

Boulder Irrigation & Water Dev. Co.

Per.

W. A. Wilson
Sec. Treas.
