Boulder Utah

May 20 - 1929

The State engineer
Salt Lake City Utah

Dear Sir:

In reference to the other creek & watter from the east fork of the boulder, as you now by the mcarty Decree Vern Lyman & Charles Nyser was Decreed 3/36 of the watter coming thiough the Lyman detch or 9/16 of the east fork of the boulder, now I bought this land and watter right.

I was wondering if you would give me a little infomation regarding the divider that was put In here by mr Clark of Panguitch last.

november in which I was alowed about 75/100 of a Cub foot of watter. on what did you base your figurs on when this amount of watter was alotted me, when the Decree dosnt say how much watter there is in the stream, but should this be the Case the highest the watter has been on the weare is 6 inches and acording to Mr Clark it should be 8 in. normal flow. I propose to mesure my watter where it enters the Deer Creek watter, and adjust this weare so that I will draw a like qunity. This is a Decreed right and used here for 28 years and more the Division on the east fork was not made acording to this Decree.

but was made according to The respective right in the detch on shares which amounted to 1½ sec foot to 15.8 shairs
The Nyser & Lyman had 120 shars.
now the watter that is Coming from the east fork is all I want at normal masured where it mixes with Deer Creak watter, if you will send me a plan work it out on, or otherse me to get mr Clark at Punguitch to do it.
Why is the one divider the only one being put in the Deer Creek stream and any one that wants to takes watter out above regardless of right or not,
will you pleas give me this infonation.
Very Truly yours
E. H. Coombs
