Boulder Utah Jan. 22, 1930.

State Engineer
Salt Lake City, Utah.

Dear Sir:- I am writing to you in regards to application File No. 10338.

Some of the water users of Boulder are very much opposed to us getting any water on this filing - some have said no matter how much water went to waste we would not get a drop.

Last spring we did extra ditch work on the canal, put in a high water box at point of deversion; cleared ground made watering ditches and planted some rye.

On the 7th of Sept. 1929 some of the men choped out and destroyed the lumber of high water box, threthened to pull out the posts holding box and to fine us $2500.00 for using water at this place.

At the same time there was a large stream of water running to waste, they could not hold it on ranches below us. The water nearly covered one mans field of cut hay. he helped destroy our divider, then next went and turned most of water from his place down the canal to waste. I saw him from my window then walked over and saw his divider partly closed with a board.

We are preparing to plant the 100 acers into crop this spring. There will be a lot of water, but we expect some trouble in getting some.

Can we have a field man from your office to come down in April or May, see conditions here, help us get some water and measure land put into crop.

And would you tell me the Amt. of money to advance your office for services of field men. I wish to be prepared.

Thank you.

Yours Truly
Mrs Annie C. Hansen
