George M Biggs.
Dragerton.
Utah.

Dear Sir

Price River Distribution

There was not enough snow below the resviour to make any water to come down the crick, so I have been up to the resviour, and Mr Henrey Knight which has a water right and there is a lot of water in the resviour, and they are taking the water that makes below the resvlour. I asked you about the water master coming out to see how much water they have stored in resviour but no one has been out yet so we would like you to see into this matter because our right comes before their storage right, we would surely had some water this spring if they did not have the resviour storing it.

Yours very truly
George M Biggs
