Enclosed herewith is copy of the State Engineer's Determination of Water Rights made on the Weber River System in the above entitled Case. Notice is hereby given that any claimant or party to this case who is dissatisfied with said determination may within ninety days from the 1st day of August, 1924 the date of mailing of said determination, file with the clerk of the Second Judicial District Court, in and for Weber County, Utah, at Ogden, Utah, a written objection thereto duly verified on oath.

Lloyd Garrison,

State Engineer.

THE STATE OF UTAH

OFFICE OF THE STATE ENGINEER

SALT LAKE CITY

To the Users of Water from the Weber River System.

Gentlemen:

Herewith please find "Determination of Water Rights" on the Weber River System as prepared by the State Engineer.

Following the statute, and in the course of events, this determination or this determination corrected and amended will be transmuted into a final decree by the district court after hearing the water users.

If errors are found in this determination as now submitted, I will appreciate having them called to my attention so that corrections or necessary amendents may be recommended by me to the court to avoid if possible a faulty decree. I will cheerfully give any advice or help that I can in any matter pertaining to this determination upon request. This offer is made believing that the users may avoid the necessity of employing much, if any, technical assistance and thus reduce expense to a minimum.

Anticipating that much interest will be taken by the users in the "duty" of water, your attention is called to the subdivision "Duty of Water" and especially to the last sentence thereof.

In making this determination I have sought and received the cooperation of the board of directors of the Weber River Water Users Association. Members of this board have authorized me to offer their services to Water Users in any adjustments that may be necessary and I commend the plan of submitting difficulties pertinent to this determination to any or all of these gentlemen at your convenience.

I am, Very truly yours,

Lloyd Garrison, State Engineer.

Proposed Determination Of Water Rights by the State Engineer

Now comes the State Engineer and respectfully shows the Court:

I.

That under the provisions of Chapter 67, Session Laws of Utah, 1919, the State Engineer is required to make a determination of all rights to the use of water from the Weber River System in the above entitled case.

II.

That the Weber River is a natural stream of water rising in and flowing through Summit, Morgan, Weber and Davis Counties in the State of Utah. It empties into Great Salt Lake in Weber County. The seven principal tributaries of the river are Beaver Creek, Silver Creek and East Canyon Creek from the south and west, and Chalk Creek, Echo Creek, Lost Creek and Ogden River from the north and east. All of the water diverted from the Weber River for irrigation, power, domestic, municipal, mining and miscellaneous purposes is used in the four counties named.

III.

That after full consideration of the statements of claims and surveys, records and files and after a personal examination of the Weber River System the State Engineer has formulated a proposed determination of all rights to the use of water from said system and makes his recommendations to the court regarding the same as hereinafter set forth.

ARRANGEMENT AND INDEX

The rights are arranged in geographical order from the source to the mouth of the said system and at the end of the determination is an alphabetical index list of the names of all corporations, associations and persons that have been made party defendants in this case.

DATE OF PRIORITY AND ACREAGE

The date of priority and acreage each party to this suit is entitled to irrigate as hereinafter set forth was determined from statements of water users' claims duly filed in this case, from "Weber River Hydrographic Survey Records," from the records of applications to appropriate water from the Weber River System on file in the office of the State Engineer, and from field investigations made by the State Engineer, his deputy, and assistants during the years 1920 to 1923 inclusive.

DUTY OF WATER

The duty of water as hereinafter set forth was determined from reports of water commissioners, duly appointed to distribute the water of said system, from field investigations made under the direction of the State Engineer, from statements of water users' claims duly filed in this case and from the records of the duty of water established by investigation, measurements and distribution of the waters of other river systems in the State of Utah over a period of years, where conditions under which water has been used are similar.

The stream flow records of the Weber River System show comparatively a very large flow in the spring and early summer and a small flow in the late summer and fall. The water users generally over the system have in times past made the practice of diverting somewhat excessive quantities of water onto their lands during the flood water season in order to thoroughly soak up the ground and keep moisture in the ground during the late season when the water supply is insufficient for their needs. This practice is beneficial to the whole river system for the reason that a considerable ground storage is built up which materially increases the normal flow of the river during the latter part of the irrigation season. Such practice would not necessarily, however, be beneficial if the river were properly equalized by storage reservoirs located at various points along the main stream and on its tributaries. Were it possible to equalize the flow of the river system over the entire

irrigation season and supply all irrigated lands with ample water a duty of one second foot of water to eighty acres of land would be sufficient under normal conditions on the said system. With this as a basis to work from and to meet the conditions, hereinbefore set forth that exist generally over the system a duty of one second foot of water to 60 acres of land on the upper river areas, one second foot of water to 65 acres of land on the middle river areas and one second foot of water to 70 acres of land on the lower river areas during the high water stages has been determined. During the low water stages and before rights are cut off according to class the duty of water is raised to one second foot of water to 80 acres of land over the entire system. While these duties will not meet extreme conditions under which lands are irrigated on the said system they will supply ample water to the lands irrigated under normal conditions. To make a soil survey, crop survey, and contour map of the irrigated lands and to show definite differences in requirements of various water users would entail enormous expense, take many years to determine and lead only to endless argument and litigation. It is recommended that the duty of water hereinbefore set out be used as the basis for the adjudication to be made by the court but that the court retain jurisdiction as hereinafter recommended for the purpose of making such corrections in the duty of water as time may show just and proper.

CLASS OF RIGHTS

In order to simplify the distribution of water the priority of rights have been divided into four general classes that are numbered. All lands that were determined to have been irrigated before and during the year 1875 are included in Class I, those irrigated between 1876 and 1890, inclusive, Class II, and those between 1891 and March 11, 1903, inclusive, Class III. All rights initiated by applications under the Act of March 12, 1903 and subsequent acts are included in Class IV and take their priority within this class according to their status in the office of the State Engineer. The first three classes are commonly called diligence rights and are distinguished from those initiated since the enactment of the law requiring the filing of an application in the office of the State Engineer. In some instances the various classes have been subdivided and lettered a, b, c, etc. to maintain priorities on some of the tributaries where it is impracticable to divide the water on a pro rata basis.

Section 34, Chapter 100, Session Laws of Utah, 1903, reads as follows:

> "Rights to the use of any of the unappropriated water in the State may be acquired by appropriation, in the manner hereinafter provided, and not otherwise.— — — — —."

Acts amendatory of said Chapter 100 contain the same provision. Because of that provision of the law all persons who have used water since 1903 without first making application therefore as provided by statute are determined to have no right, title or interest in or to the use of water of the Weber River System by reason of such use.

ROTATION OF RIGHTS

It is recommended that in cases where the quantities of water determined to various individual rights are too small for practical irrigation purposes such rights be combined wherever feasible and rotated among the various users in such manner as to deliver to each the total quantity of water which he would receive if distribution were made on the basis of continuous flow as outlined in the determination. Where it is not feasible to combine the flow determined to several rights it is recommended that the flow distributed to isolated rights be increased to give a stream sufficient for practical irrigation purposes and the time decreased in such a way as to deliver to such rights the same amount of water as would be delivered if the continuous flow determined to the right should be distributed.

Such combination of rights and flow are matters of practical distribution and should be under control of the river Water Commissioner.

RECOMMENDATIONS TO THE COURT

It is recommended that the rights to the use of water in the Weber River System be decreed to the various parties substantially as set forth in this determination but it is further recommended that the court retain jurisdiction of this case for a period of five years for the purpose of making adjustments in the duty of water, correction of errors and for such other purposes as time may indicate to the court as proper and just.

BENEFICIAL USE OF WATER

That not withstanding this determination of water rights users of water shall at no time divert more water than can be beneficially used and waste of water should be prohibited.

SERVICES OF STATE ENGINEER AVAILABLE

It is suggested that in all matters whatsoever pertaining to this determination and the decree to be rendered the services and advice of the State Engineer are available to the Court at all times.

IV.

PROPOSED DETERMINATION OF WATER RIGHTS ON WEBER RIVER SYSTEM.

"c.f.s." is used throughout this determination to designate a flow of one cubic foot of water per second of time.
"ac.ft." is used throughout this determination to designate a quantity of water sufficient to cover an area of one acre to a depth of one foot, or 43,560 cubic feet of water.
"duty" is used throughout this determination to designate the number of acres one "c.f.s." direct flow is required to irrigate, or the amount of stored water in "ac. ft." required to irrigate one acre.

VII

Section 41, Chapter 67, Session Laws of 1919 provides in part as follows: "Rights to the use of the unappropriated public water in the State may be acquired by appropriation, in the manner hereinafter provided, and not otherwise."

This clause has never been interpreted by the Courts of this State but the State Engineer has always interpreted the same to mean that unless a water user made application to the State Engineer as provided by Statute, he obtained no priority as against a subsequent applicant, even though he placed water to beneficial use. For that reason all persons claiming water rights which have been initiated since 1903 without covering the same by application have been determined to have no right to the use of such water. The question as to whether or not beneficial use will give title to the use of water without application having been made therefor should be settled. The list of persons making claims to the use of water since 1903 and the facts as determined by the State Engineer relative thereto are tabulated herewith. These persons, corporations, or associations are determined to have no right to the water which they claim.

BENNION LIVESTOCK CO., Templeton Bldg., Salt Lake City, Utah.

1914 — 30.0 — 60 or 80 — 0.50 c.f.s. From June 1 to Sept 1 during high water stage.

VIII.

Certain lands in this State have enjoyed some benefits from the application of water thereto by other than diversion from natural channels or sources, such for instance, as natural swamps or meadow lands watered from over flow, seepage water, etc.

The Statutes appear not to point the way sufficiently to enable the State Engineer certainly to determine water rights with respect to these classes of lands and no determination, therefore, is made with respect to them. The tabulation separately shown hereafter shows facts as to these lands and water uses, such as dates of priority, points of collection, general location and such other data as may enable the court to determine the status of these uses.

The services of the State Engineer, if necessary, will gladly be given to assist the court in arriving at its conclusions.
