Mr Geo. M. Bacon,
State Engineer.
Dear Sir;

In reply to your letter of Aug 3rd regarding the De Marco, Elegante situation.

The Elegantis use five points of diversions in Spring Canyon Wash. One at Crystal Spring, the others being strung along the wash, the last one below Goat Spring which is fully 2800 ft below Crystal spring.

They can divert all of Crystal Spring water by use of a pipe at Crystal for one plot of Ground in Sec 22 but for their land in Sec 23 its would be impossible and from my judgement the cost would be prohibitive if they tried to cover all the land they now have under cultivation.

Yours very truly.

W. K. Hayman
