Mr. F. H. Humphreys
State Engineer
403 State Capitol
Salt Lake City, Utah.

Dear Sir:

Would it be possible for the Commissioner, for the Fremont river and tributaries, to come down at once and take charge of Boul Creek for the purpose of making a division of the water of the said creek to the parties entitled to the use thereof, we are very much in need of having this water divided as it should be.

On June third our water stopped we thought that perhaps it was due to the cold wave we have had, Today we went up the creek to the Pace diversion dam and found the Pace ditch full to capacity and just a small stream finding its way through the dam, which is made of rocks and sacks of sand and gravel, we did not measure the water in Pace ditch, but judging from measurements which we have made other years when his ditch was full to capacity I would say there was between twelve and fifteen second feet or more of water going down his ditch, we took off a few of the sacks of sand from the middle of the dam so as to let some of our water come down as we are very much in need of the water at the present time.

We talked with Pace hired man at his ranch and he said he was going right up

Pace,

and put the water back into the Pace ditch as he had orders from Mr. Pace to keep the ditch full at all times if there was any water in the creek, we told him he had better leave it as it was until the water commissioner could come down and make a division of the water, but he said no that he couldn't do that, that he would have to go up and fill the ditch again, we told him that we were only taking the water which belonged to us, and we left him a large stream of water in his ditch.

We would appreciate it very much if the commissioner will come down at once and take charge of this stream.

Yours very truly

Columbus R. Hall
Roxanna D. Hall

By Mrs. A. J. Denny.
