JUN 2 1927

Geo. M. Bacon
State Engineer
Salt Lake City Utah.

Dear Sir:—

I just returned from Hankville and while there we, my father and I, went up Boul Creek to Mr. Paces diversion point. so shall report to you our finds. we found that Mr. Pace has no measuring device in his ditch, and he has a dam accross the main channel and all the water from the creek is in his ditch. we measured the water in his ditch and found it to be 3½ ft. wide 12 in. deep and runs 100 feet in 20 seconds, that is about 18 feet of water, is it not?

In your letter of the 24 inst. you said you could do nothing until you heard from Mr. Pace. I am afraid you will not hear from him, as he is not anxious that there be a water commissioner appointed, does not the water law just require a petition of the majority of the water users? would it this come under provisions of Sec. 70 of Session laws 1919 & 1921

Mr. & Mrs. Hall both applied & made request that the Engineer appoint a commissioner to make proper distribution of the waters of Boul Creek.

Mr. Ostberg is an inexperienced man, so wouldn't it be better to have a man who has done this kind of work to go see to the putting in of the measuring device and dividing of the water at Mr. Paces diversion point, as he has not complied with your request in accordance with section 68 of the Utah Water Laws.

I understand Commissioner S. E. Tanner of Fremont Wayne Co. Utah is a very good man on water business, if it is permissable we would like him to attend to this business.

There needs to be a headgate which can be set and locked, or the water will never be let go down the channel.

We will pay our share of the expences if you will send Mr. Tanner down to attend to this work, after things have been regulated I think Mr. Ostberg could attend to it. You also told me of a commissioner at Richfield, if Mr. Tanner is not accessable perhaps the Richfield man could go attend to it.

Mr. Hall has most of his crop planted but no water,

Yours very truly

C. R. Hall
Mrs. R. D. Hall
Mrs. A. J. Dunn
