5 DATE

MONTH May YEAR 1988

DAILY RECORD OF EVENTS

Commitments Exchanged · Journal Entry · Thoughts & Ideas · Agendas (telephone, meetings) · Conversations

(b) John Larsen - Position Upgrade
① Expressed concern over need to provide some upward mobility within the water right specialists classification - the need probably for a Water Rights Spec. IV position and perhaps more III positions.
② Items for perform. contrast
- Train Mike to supervise Utah Lake Adjud. Crew.
- Distribution - learn about system and help to identify areas needing work.
- Well-Drilling - learn about system and procedures

(c) SANDITCH RIVER SYSTEM - CONSOLIDATION PROBLEM.
① Lee Kapoloski & Roger Johnson & Bob Morgan
② This dry year is going to be a problem - lower users have higher right. Now only ≈10 cfs in river at Moroni but all ditches above it are full. There is a big problem with expanded acreage - trib & main stem
③ Suggested an order through the new administrative procedures act and invite comment through the hearing process.
④ Ought to be done this fall to be ready to go next February or March at annual meeting.
⑤ Maybe get the Judge (district) to appoint a commissioner. - Maybe puts more teeth into it.
⑥ A vote would mean it was an issue that could be brought up and re hashed every year - want to avoid that.
⑦ Stan has a priority schedule.
⑧ Do we phase it in - what type of process? Talk to Dallin with Bob.
⑨ Measuring Devices are a problem

(d) Bob Fotheringham - Meadowville Problem.
① He found the two stipulations in the Randolph Courthouse but they weren't the originals - will look in Cache Co. Courthouse. John M. says we need to see who signed the one (Exhibit 'A') which talks of ~~dividing~~ putting the ditch on time early when agreed by both parties before we really understand who it pertains to.
② Frank Weston called him this morning - Bob explained the situation with the stipulations and Frank agreed that he may not have a right in Jebo Creek but he was going to

MAY 1988

DAILY RECORD OF EVENTS

4 WEDNESDAY

125th Day 241 Left Week 18

(a) Bill Van Waggonen - HAFB - Newf. Dike Trip
① They could probably schedule an hour or maybe 2 for us on Thursday June 9 to see the Dike.
② Call him on May 25 to make final arrangements and then call ~~just before~~ on the 6th or 7th to confirm everything is still okay.

(b) Bob F. - Meadowville.
① One of the stipulations was put together wrong (P.2 of Exhibit 'A' was behind Exhibit 'B') by changing to the correct order - it now appears the Cooks were not a party to the stipulation which talks about putting the system on time earlier than May 18.
② He is going to see what he can find in the courthouse in Randolph - will not put the system on time now - the combined flow of Twft & Jebo is less than 2 cfs. Cooks were very upset that he was up to look at the water.
③ Westons were not there - call Frank to let him know what is happening. Frank Weston 946-3370 Theron Weston 946-3472

(c) John Maybe - Meadowville - wait to call Frank until we see what Bob finds in Courthouse.

(d) Lynn Mendenhall - SPANISH FORK-HIGHLINE PROBLEM (see 5-2)
① The Highline Division has a secondary right on the River (to the flow between 390 cfs and 690 cfs) plus a Strawberry Res. storage of 2 AF/Ac.
② The 5 Major Irrig. Co. on the River have the primary right (1st 390 cfs) plus Strawberry storage water of 1 AF/Ac.
③ Right now the river is flowing 150 cfs.
④ The Highline Canal Co. is higher on the river than the 5 Major ~~canal~~ irrig. Co. The companies are taking the river right now but because of the rain the last few weeks and because of water changes at night etc the water has been dumped back into the Spanish Fork River (the canal has a drain back to the River). This water shows up in the early morning at the lower diversions on the

(a) Frank Weston - Meadowville Problem.
① The Hart decree was the original decree in the area which gave the Cheney Creek water to the meadows. It was on the basis of that decree that the Cooks lost their reservoir in 1962.
② Feels Cooks have expanded their acreage - they continue sprinkling during his water turn - he feels this takes water from him and they should be prohibited during his turn.
③ Would like to meet with us to explain his understanding of situation - he was involved in all of it - has a hard time explaining but if someone could ask him the right questions he feels he could give some good insight on why and how things happened.
④ Would like to meet us up there - would be helpful if Harold could come

(b) Bill Van Waggoner - (HAFB) Clearance for staff trips
① scheduled right now for 9:30 - 11:00 Am on ~~June~~ June 9.
② Call him on the 6th or 7th to confirm that.

(c) Healthwise will allow us to pay $25/month on the over payment of the claims of John evaluation with Dr. Davidson. Don't send any money now - they will send us a card confirming this. Send a copy of the card or letter with each payment.

(d) Mark Page - Emma & Jaynie Walker Problem - Millcreek Sys.
① assessments 1983 - 1987 equal 682.38, delinquency for same period total 66.36. 1988 assessment = $61.00
② Why did assessment notice show total due of 874.45? ($809.74 is total of ①). Ask Allen Rowe.
③ Jaynie Walker paid $200 today - will tell River Comm. to take lock off gate. She feels she will have remainder within 30 days. The irrigation co. probably is using her ditch and ~~should~~ will probably help her make the payments.
④ I should send her a letter clarifying the amount of assessment owed and acknowledging receipt of $200.

take the water anyway. Bob told him he didn't have a right to and he would be acting totally on his own if he did. Frank said he understood that but he was going to do it anyway. Frank called Will back later and talked to him - also said he had taken the water - told Will that the Interlocutory Order of 1958 was the one that governed - we agree but it refers to one of the stipulations and we are not sure which one yet. That is what Bob is looking for.
③ When this finally gets straightened out in our minds we need to write a distribution paper of sorts explaining what the governing documents are and how the system should be operated on the basis of those documents.
④ Bob also suggested a distribution order concerning the pipeline that Cooks have put in. The system really relies on return flow and since the pipes went in the returns have decreased. The order should probably state no pipeline are allowed unless there is an outlet to return a certain percentage (based on previous return flow estimates) of the water to the creek at the point it would usually return.

(e) My Birthday - 37 years old - don't feel any different. People were very nice to me today - my secretary Bonnie brought a vegetable plate and dip and everyone ~~sang~~ happy birthday to me. Tonight my folks and Susan's parents came out to have some cake and ice cream with us. ~~and~~ We had a nice visit. Dad said Aunt Iva is going in to the hospital tomorrow to have some tests ~~to~~ to examine a lump they have discovered on her lung. I am glad I took the time last week to write to her.
