Glendale, Utah
October 16, 1978.

Dear Sirs:

This letter concerns Water Right # 81-465, a-8093

Our water this summer, on about Sept. 22, Became very muddy & low. On inspection at the water head where we get our culinary and irrigation water we found that Mr Jerl Blackburn had been building several dams across the canyon wash and streams, one of which caused the water to run over our water head house - causing pollution of drinking water and bursting of our water line.

Since this time Mr Blackburn put a garden hose in the line, which is all the water we have had, which has been very inadequate for 2 families. We have had none for irregation or watering the animals (except that which has been carried from the house.

The Water Engineer sent someone from his office to investigate the situation for us. He asked Mr Cox & Mr Chamberlain how the wanted this resolved. He then took the proposal to Mr Blackburn, and all parties agreed to how it was to be handled.

Your Representative told Mr Blackburn he had until the 8th of October to complete this work.

As to this date nothing has been done on the water head house, But Mr Blackburn has made 4 more big dams on up the canyon.

Gordon Chamberlain called us the other day

and said she didn't have water to do her washing. So we shut off our water so she could wash. When she washes or her family Bath We have to wait so we are not using water at the same time, or else there isn't any.
Right Now I have the biggest Washing stacked in my wash room that I have ever had waiting to be Washed.

We feel very urgently a need to have this matter resolved as soon as possible.

Mr Blackburn talked to my husband (Mr Cox) and tried to give us $400.00 instead of him fixing up the Water there which is cheaper than it would take to hook up to the town water - then we would from then on have a water bill monthly to pay. So we had to refuse that offer.

We would appreciate your immediate help in this situation.

Yours Sincerely
Valoyce & E.
E. Marion Cox

5 gpm in Garden Hose = 7200 gal/Day
