re: Fremont River

Dear Mrs. Shail:

After our telephone conversation today, I talked with Kirk Forbush, the regional engineer over the Fremont River area. His information shows that your water right from the Fremont River is 95-4690. This right describes the 2.5 cfs water right that was originally decreed to William and Dez Hickman. Our records show that you own half interest in the right and that Wes Chadburn owns the other half. In the decree, this water right is listed as a Class B water right which has a lower priority than the Class A water described in the decree. Class B water is usually available only during the high spring runoff each year.

At your request, we are re-establishing your assessment account (19-6) for the Fremont River Distribution System. Your assessment will not be included with the others who are participating in the sprinkle irrigation system. Since there is no separate measurement for your water, we have had to make an assumption on how to make your assessment each year. For the present time, until we get better information, we will set your assessment at the minimum level because your water right is Class B. You should receive an assessment next year.

Since we were able to locate your water right, I have not included the other information that you requested. If you have any further questions, please contact me at 538-7380.

Sincerely,

A handwritten signature in black ink, appearing to read "Lee H. Sim".

Lee H. Sim, P.E.

Assistant State Engineer  
for Adjudication and Distribution
