WATER RIGHTS  
SALT LAKE

Robert L. Morgan, P.E.  
State Engineer  
1636 West North Temple, Suite 220  
Salt Lake City, Utah 84116-3156

Dear Mr. Morgan:

I have been asked to make a study of the winter water right of Carbon Canal Company evidenced by Application No. 1036, a-494, a-1189, and a-4090. I have before me a letter from you to the canal company, dated November 1, 1991, a copy of which is enclosed, in which you state in the third and fourth paragraphs on page 1:

"....It should be noted that in the Proposed Determination of Water Rights for the Price River, supplemental rights are listed to assist in supplying the water for the domestic and livestock uses described on your water right. As a result, this water right is not considered to be the sole provider of water during the non-irrigation season.

"The volume of water required to provide for these uses during the winter season has been calculated to be 184.56 acre feet. This volume can be provided by an average daily flow of 0.51 second feet of water."

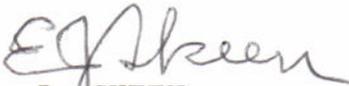

Please inform me as to the names of the owner or owners of the supplemental rights you refer to and the WUC number of each right. Also let me know the source of information for the calculation of 184.56 and 0.51 second feet.

On page 2 of the letter, you state that the Price River Water Commissioner's annual reports for 1971 - 1989, "....indicate that an average flow of 13.4 second feet is diverted during the winter season". Please inform me where the flow measurements were made and how 13.4 second feet was calculated.

Thank you in advance.

Respectfully,

  
E. J. SKEEN
