Subject: Water Year 2009 Administration of Central Utah Project, Bonneville Unit, Utah Lake / Provo River Storage Exchanges under CUP Water Right Nos. A40523, A36639, A37093, E398, E4319 and Central Utah Water Conservancy District Water Right Nos. E3100 and E3101

Dear John:

Currently the elevation of Utah Lake is 4488.625 feet, or -0.42 feet below the compromise elevation. Based on the current forecast and the levels of upstream reservoirs it appears that the elevation of Utah Lake will cross the conversion line this year. Once the conversion line has been crossed we request that you convert all system storage in Deer Creek and Jordanelle reservoirs to priority storage.

Currently approximately 49,200 acre-feet of CUP water is being held in Utah Lake on a space available basis subject to incremental evaporation. If Utah Lake were to reach the compromise elevation and the gates to the Jordan River were opened we understand that the CUP water would be the first to spill out of Utah Lake.

Please contact me if you have any questions.

Sincerely yours,

Jared D. Hansen, P.E.
Project Manager
