Re: Meeting held - West Point and Bagnall Diversion
Sanpitch River

Dear Sir:

This letter is to confirm some of the things we talked about the other day concerning water distribution in the West Point and Bagnall Diversion of Sanpitch River.

We feel strongly that the fairest way to distribute the water is with the use of boards so that the water can flow over evenly, rather than to have an open ditch on one side and gates screwed down on the other to allow the split to go under the gate.

Also we feel it is unfair to shut West Point water off while raising the water to be used above the diversion and would hope that this practise would cease.

We shall appreciate your help in getting these things straightened up.

Sincerely,

Richard R. Christensen
President, West Point
Irrigation Company
