

**Response to Central Utah Water Conservancy District:**

1. We acknowledge your interest in base data upon which the distribution plan was based. We are currently working to finalize the data and model and document them in a presentable form. We plan to release them with the next revision of the Distribution Plan Document.

2. North Jordan Irrigation Company's water rights have historically been satisfied from accretionary flow rather than direct diversions from Utah Lake. However, according to the Morse Decree they are entitled to direct diversions from Utah Lake. Direct diversions have just not been necessary over most of the historic period.

3. The information used to arrive at the figures in the table on page 5 comes from various sources. We selected values initially which we felt provide worse case protection to the Utah Lake storage rights. We then "fine tuned" with the model to try and make historical shortages comparable with model predicted shortages. When we release the model we expect you can explore this issue further.

4. See USBR item 4 response

5. See USBR item 4 response.

6. Please see response to USBR item 5.

7. Please see response to USBR item 2. We have not responded to the specific example regarding the Strawberry Aqueduct since there is confusion over the specific sources involved and exactly what is contemplated. We would appreciate some additional clarification.

8. We note the District owns a significant interest in Utah Lake rights. We will work with you to determine how the plan needs to be adjusted for any change in use proposed by the District as applications are submitted for that purpose.

9. The proposed plan does not preclude the exchange of system storage with water from another source, for example the District could exchange Strawberry Reservoir water released to Utah Lake with "system storage" held in Jordanelle Reservoir.

10. We would encourage you to review the information contained in this response and submit additional comments and questions at your earliest convenience.
