SAN PITCH RIVER DISTRIBUTION SYSTEM

** REVISED 1971 WATER ASSESSMENT **

\$ 3,000.00

FORWARD:

As of April 27, 1971, the 1971 Annual Water Assessment was revised, due to erroneous reporting by the Water Commissioner of water used by account No's 14, 15, 16. The commissioner stated by telephone to the State Engineer's office on March 16, 1971, that no assessment is to be levied on these water users, but further investigation disclosed these water users did use water during 1970, though no definite water measurements could be obtained. Therefore, the previous 5-year average of water deliveries was used as a basis for the 1971 water assessment, to these three users.

BASIS OF ASSESSMENT:

The Annual water assessment is now calculated upon the Commissioner's Annual Report of water (excluding the above named accounts) delivered in the previous year (1970) instead of the previous 5-years average delivery.

CALCULATION OF ASSESSMENT:

(1) Total amount of acre-feet of water delivered in 1970 as reported by the Commissioner was 30,673.40 acre-feet.

(2) \$ 3,000.00 divided by 30,673.40 acre-feet of water equals \$ 0.0978046125, cost of one pro-rata acre-foot of water used during the year of 1970. This multiplied times the amount reported as used by each user equals his or her 1971 Water Assessment.

PROOF:

\$ 0.0978046125 times 30,673.40 equals \$ 3,000.00
