1984 ASSESSMENT SUPPLEMENT

Spanish Fork River Distribution System

As a result of the Thistle Slide and the flooding which occurred last spring along the Spanish Fork River some of the diversion structures were lost or inundated. As a result many of the users did not receive any water in 1983 according to the commissioner's report.

As you are aware assessments on the Spanish Fork River have traditionally been based on the water received in the previous year. Because the budget and assessment for the system is to be increased to cover additional expenses we felt it would be unfair not to assess all the users.

As a result if you received no water deliveries during 1983 your 1984 Assessment is based on a five-year average including the years of 1978, 1979, 1980, 1981 and 1982.

ASSESSMENT SUPPLEMENT

Spanish Fork River
Distribution System

As a result of the Thistle slide and the flooding which occurred last spring along the Spanish Fork River some of the diversion structures were lost or inundated. As a result many of the users did not receive any water in 1983 according to the commissioners report.

As you are aware assessments on the Spanish Fork River have historically been based on the water received in the previous year. Because the budget ^{assessment} for the system is to ^{BE INCREASED} ~~essentially~~ ^{TO COVER ADDITIONAL EXPENSES} ~~remain the same as it was in~~ 1983 we felt it would be unfair not to assess all the users.

As a result if you received no water deliveries during 1983 your 1984 assessment is based on a five year average including the years 1978, 1979, 1980, 1981, and 1982.
