

LITTLE BEAR RIVER DISTRIBUTION SYSTEM

**** 1965 WATER ASSESSMENT ****

\$ 1,800.00

Forward: There are several new accounts that are to be assessed commencing in 1964 and the internal complications involves the discontinuance again for the time being the five year average basis of assessment. Therefore, the 1965 Assessment is based upon the amount delivered during 1964.

CALCULATION OF THE 1965 ASSESSMENT:

The first problem is to determine the minimum \$ 5.00 users and the maximum amount (or less) of acre-foot delivery for such users. 1/

\$ 1,800.00 divided by 44,187 acre-feet of water equals \$0.0407359630 and \$ 5.00 divided by \$ 0.0407359630 equals 122.74 acre-feet of water (or less) as the minimum of water to be assessed for such accounts.

There are 37 such users whose total delivery of water is 1,682.00 which substracted from 44,187.00 leaves 42,505.00 acre-feet of water to be assessed against the balance of users.

	\$ 1,800.00 equals	44,187.00	A/Feet		(All Users)
Less	185.00 equals	1,682.00	A/Feet		(Min. \$ 5.00 users)

Therefore, \$1615.00 divided by 42,505.00 acre-feet equals \$ 0.037995530 cost for one acre-foot of water on an equal pro-rata basis times the amount listed for each users as his/her 1965 Assessment.

PROOF:

42,505.00 Af/Ft times	\$ 0.037995530 equals . . .	\$ 1,615.00
1,682.00 Af/Ft Times 37 times	\$ 5.00 equals . . .	185.00
		\$ 1,800.00
