

LITTLE BEAR RIVER DISTRIBUTION SYSTEM

1958 ASSESSMENT

** \$1,000.00 **

BASIS OF ASSESSMENT

The 1958 Assessment is based upon a 5-year average delivery of acre-feet of water for the years 1953-1957, inclusive, with a minimum assessment of \$2.00 for any one water user who may be assessed in accordance with the Commissioner's Report and as listed in the office of the State Engineer.

ACRE-FEET OF WATER DELIVERED

Total delivery, 1957	:	47,212.39
" " , Five Years	:	210,643.51
" " , Five Year Average	:	42,128.70

CALCULATION OF THE 1958 ASSESSMENT

\$1,000.00 divided by 42,128.70 five-year average acre-feet of water equals \$0.023736788 cost per one five year average acre-foot of water or the over-all factor in determining the minimum \$2.00 assessments. Therefore, \$2.00 divided by \$0.023736788 equals 84.2574 acre-feet of water, or less, as the minimum of water to be assessed in determining such assessments

There are 17 such minimum users whose total 5-year average delivery of water is 1,014.90 acre-feet, which is subtracted from 42,128.70 acre-feet leaving 41,113.80 acre-feet of water to be assessed against all other users.

	\$1,000.00 equals 42,128.70 A/Ft.	(All user's)
Less	(\$ 34.00) " (1,014.90) " "	(Min. \$2.00 User's)
	\$ 966.00 " 41,113.80 " "	(Reg. User's)

\$966.00 divided by 41,113.80 Acre-feet equals \$0.0234957606 cost per one 5-year average acre-foot of water for which Regular User's are to be assessed.

PROOF

41,113.80 times \$0.0234957606 equals	\$966.00
(1,014.90 A/Ft. or) 17 times \$2.00 =	34.00
42,128.70 A/Ft. equals	1,000.00
