

Recently, Google released a version of Chrome which does not support 32-bit NPAPI plugins, which includes the Google Earth plugin.

Here are some steps to follow to enable the NPAPI plugins

- 1) Type this address in the URL (or copy and paste)
- `chrome://flags/#enable-npapi`
- Press enter

2) Enable “Enable NPAPI Mac, Windows”

3) You might have to shut down the browser and restart it.
