## NOTES TO WATER RIGHTS ADDENDUM TO WATER DEEDS

Please read the following notes carefully in order to avoid problems and the possible loss of the water rights being conveyed in connection with this transaction.

**The mere purchase of a water right does not guarantee: (1) that the water right is in good standing with the Utah Division of Water Rights; (2) that the owner has clear title to the water right; (3) that the Division will recognize the ownership change; or (4) that the Division will approve any proposed changes or extensions regarding the water right. You are encouraged to conduct proper “due diligence” research into any water right before purchasing it.**

### Section

- 1-4 Once this Water Right Addendum and deed has been recorded at the County Recorder’s Office, the county recorder shall transmit a paper or electronic copy of the deed and water rights addendum to the state engineer. Water right deeds and addendum submitted in conformance with statute which names as the grantor the person listed as owner of state engineer records - shall be processed as though it were a completed report of water right conveyance. If the state engineer does not update water right ownership on records of the Division upon submittal of a Water Right Addendum and deed, a water right owner must submit a report of water right conveyance (ROC) as directed in Utah Code Section 73-1-10(3). Filing an ROC is necessary in order to: (1) have the Division’s records updated with current ownership and address information; (2) file any application on these water rights; and (3) receive notifications concerning deadlines and other essential information pertaining to these rights. Help with reviewing the water rights and the ROC can be obtained from the Utah Division of Water Rights and/or water professionals, such as attorneys, engineers, surveyors, and title professionals with experience in water rights and water law.
- 1 There are three general types of deeds – warranty deeds, special warranty deeds, and quit claim deeds – which can be used to convey water rights. The primary difference between them is the type of warranty being given, which has a dramatic effect on the rights and responsibilities of both the Grantor and the Grantee. If you are unsure about the type of deed that you should use or accept, you should obtain legal advice on this issue.
- 2 Water rights owned by the Grantor and used on Grantor’s Parcel may be “appurtenant” to Grantor’s Parcel. Not all appurtenant water rights have been assigned a water right number because not all water rights are “of record.” If either of the first two boxes in Section 2 are checked, this conveyance includes all appurtenant water rights, whether or not they are listed by water right number or are of record; only water right numbers listed on the addendum will be updated. Grantee should investigate each water right listed and determine if there are any water rights that are not of record. If there are water rights not of record, Grantee should seriously consider making them of record by filing the appropriate forms with the Utah Division of Water Rights.
- 3 A Water right can be conveyed in whole (100% of the right is conveyed) or in part (only a portion of the right is conveyed). If the whole right is conveyed, you do not need to describe the beneficial uses associated with the right. If only a part is being conveyed, you need to describe exactly what beneficial uses are being conveyed. This is usually expressed in terms of acre-feet and generally consists of: (1) the number of families for domestic (indoor culinary) uses (generally quantified as 0.45 acre-feet per family for a year-round residence and 0.25 acre-feet per family for a seasonal residence); (2) the number of acres irrigated (this involves issues of “irrigation duty” [the number of acre-feet of water allowed per acre of irrigated land] and “sole supply/supplemental supply”[the amount of water allocated to each water right when more than one right is being used on the same land or for the same livestock]; and (3) the number of livestock being watered (expressed in terms of equivalent livestock units or “ELUs” which are quantified at the rate of 0.028 acre feet per ELU for full-year use). Any other uses being conveyed should be similarly described. Help with evaluating, quantifying, and/or describing the uses can be obtained from the Utah Division of Water Rights and/or water professionals.
- 4 Shares of stock in water companies (including irrigation, canal, and ditch companies) are generally not transferred by deed. Each company has procedures for transferring ownership. The company should be contacted to ascertain the appropriate procedures to follow. The most common procedure is for the Grantor to endorse and deliver the stock certificate to the Grantee, who then presents that certificate to company for issuance of a new certificate in the Grantee’s name. If another procedure is to be followed, that should be noted on the “Other water related disclosures” line in Section 4 of this form. Each company also defines how much water is associated with a particular share and what fees and assessments are charged. The Grantee should contact the company about all such issues. There is also space provided in this section for any other information that the Grantor believes may be relevant to the water rights being transferred or for any other water related issues.
